
Operation & Maintenance

Enigma sliding pocket door is guaranteed for 12 months against faulty materials. In our experience, once the system is correctly installed there is very little to actually go wrong unless the door is abused.

It is important to inspect the door periodically and we would recommend at least annually. More frequent inspections should be carried out if the door is fitted in an area where there is a lower incentive to exercise care in usage of the door.

The inspection should include opening and closing the door to check the door is free running and there are no obstacles or obstructions.

Check the door and any handles or fittings for any damage and check for tightness of all fixings. The door should also be checked to make sure it is secure on the carriers and central between the pocket jambs.

The seals fitted at both the opening and closing jambs should be checked for overall condition and that they remain fixed securely within their locating grooves.

The bottom of the door should be inspected to ensure the T-guide is still fixed securely in place and the door has not suffered any damage.
